Democratizing diamond trading with blockchain

The THESAURUM DIAMOND TRADING TOKEN (TDTT) has established a financially and environmentally sustainable business model that relies on both the mining of diamonds through their own mine in Liberia, their consecutive refinement and sale, as well as diamond flipping (the acquisition of diamonds from third parties and their resale).

With its newly founded blockchain initiative, Thesaurum introduces an innovative ecosystem for diamond trading and investing that offers access to a variety of services. At the heart of the ecosystem is the diamond trading marketplace that allows both the acquisition and delivery, as well as resale possibilities through Thesaurum and their extensive network of merchant partners. Participants can acquire storage services, closing the cycle and resulting in a full-fledged platform that covers all services related to diamond investing from A to Z. Beyond that, Thesaurum also introduces the Diamond Academy, an incentive-based platform for learning programs and informational resources that provides access to everything diamond investors and fans have to know about precious stones - from their history and physical properties to their role as an asset class.

The project seeks to transform diamonds into a liquid and inclusive asset class, creating a new paradigm where retail investors can participate alongside institutional players. Thesaurum not only provides access to a valuable commodity but also enhances investor confidence through ethical sourcing, blockchain transparency, and robust collateralization.

The Thesaurum ecosystem

The diamond marketplace

On the marketplace, users will be able to purchase rough or polished diamonds directly from Thesaurum. The diamonds can then be either delivered to their owners at their request or submitted for resale by Thesaurum (diamond flipping) to generate ROI for their owners.

The Thesaurum

loyalty program rewards active and engaged users with exclusive benefits, creating a valuedriven ecosystem. By participating in the program, users can unlock deals, fee reductions, and periodic token drops to enhance their overall experience.

academy The Diamond

Academy will give access to a variety of learning resources and programs based on userässpecific interest in diamonds. With an interactive and rewarding learning process, the Academy will aim to educate users on all aspects related to diamonds.
